

## Integration Guide - Eltako gateway

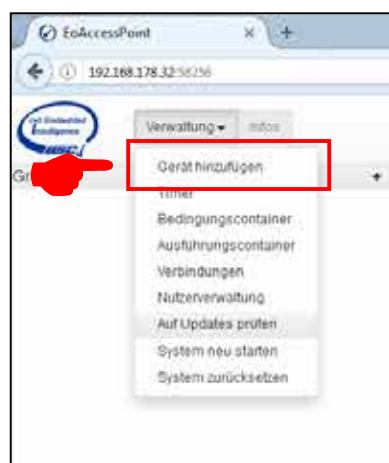

› The version of the Eltako TF-IP-ConIV gateway used must be 2.12 or higher. To test it, start your browser and enter the gateway's IP address into the address line.

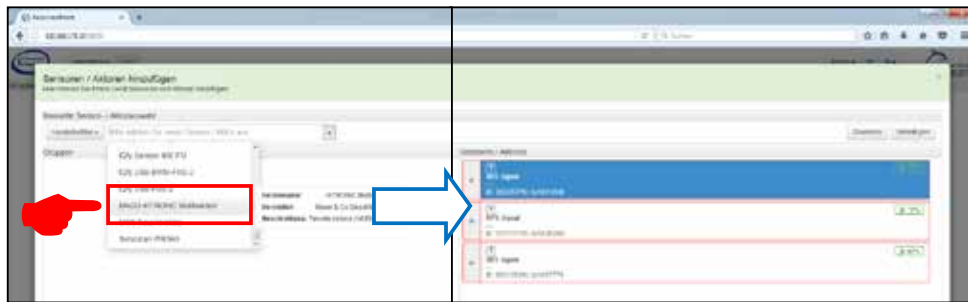

Then, click on **“Administration / Check for Updates”**.

› Click the function **“Administration / Add Device”**.

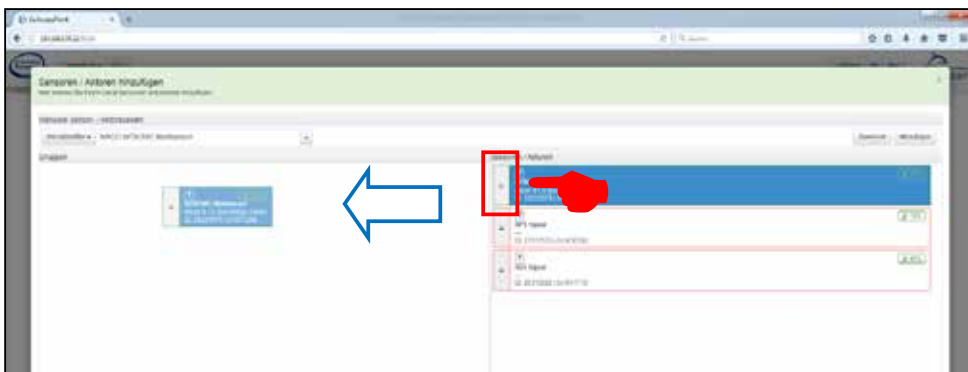

- › Select “MACO mTronic multisensor” or “MACO eTronic window sensor” from the list. The sensor is added to the list.

- › Teach sensor (as per instructions = magnet via reed contact resp. 3 times briefly press), the signal is detected as a 4BS signal. By clicking the “Assign” button, the signal received is assigned to the MACO mTronic multisensor or the MACO eTronic window sensor.

- › To drag the MACO mTronic multisensor resp. the MACO eTronic window sensor into the “Groups” field, you have to click the field and drag it there.

- › Check sensor by operating the window. If status messages are incorrect, test the mode or the mounting position of the sensor.
