THE MACO SMARTPHONE APP AS KEY

TIMBER
PVC
ALUMINIUM

Access control, that gets your motor running

Motorised locks are the future when it comes to your house's calling card. They are a prerequisite for convenient and keyless opening of the front door via access control such as a smartphone. Combine these with the A-TS with motorised opening or with the M-TS motorised lock and increase both comfort and security on the front door.

User-friendly

In use, the INSTINCT App lives up to its name – intuitive and easy to use. It requires neither training nor a complicated web solution for assigning user rights.

Comfortable

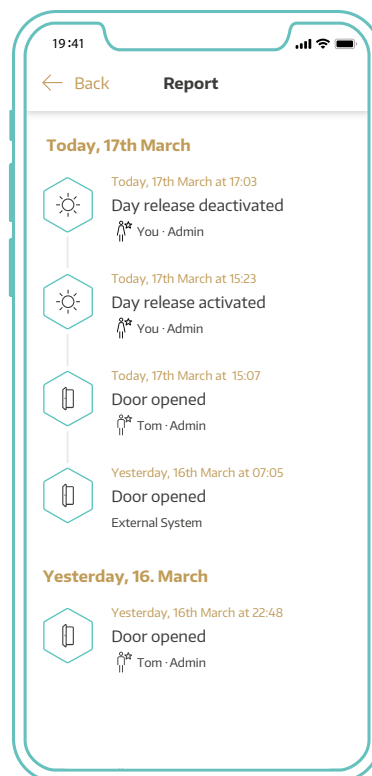

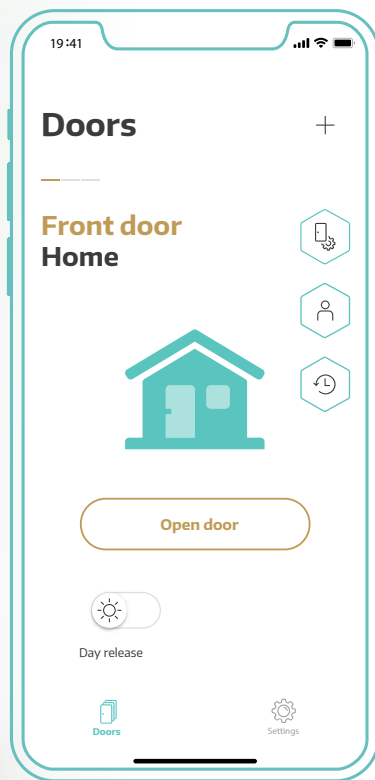

With the App, your front door can be conveniently opened and controlled. Those who, for example, want to add further door openers for kids, can also add a fingerprint or keypad device. Manual opening by key is always possible.

Secure

In terms of security, MACO relies on Bluetooth as it is the proven technology for wireless-based access control. All information is encrypted and stored locally in the door. Thus, only the user has full control of their data.

The smartphone is a part of daily life and our most personal, cherished gadget, e.g. always there for musical support when jogging. Isn't it then obvious to open your front door with it? MACO has developed an App for this which turns your smartphone into a key replacement and is thus the most convenient, modern and cost-effective access solution - a real alternative to a keypad or finger scan.

The INSTINCT App is available free of charge for iOS and Android. No complicated web-based programming is required. Simply download from the App or Play Store, activate and set up your doors.

Open easily

Use simply

Manage access

Permanent or time-limited - who has access when and for how long is determined via the time function. The classic key management for cleaners or flower-watering neighbours is thus done away with completely.

One-time key

Uncomplicated access for spontaneous admission, e.g. for tradesmen, can be assigned spontaneously and on the go. To do this, the person concerned downloads the App to their smartphone and receives one-time access via an invitation code.

Daily Release

Keyless daytime operation. Got a party or children's birthday party in the house? The day release function makes it possible for guests to go in and out during this time, until this function is deactivated again. This can also, if desired, be planned ahead of time.

Construction mode

In the construction phase, any tradesman who has the App on their smartphone can connect to the door and open it, until the house is ready for occupancy and the landlord withdraws the authorisation.

Short wireless links

Secure thanks to AES-256 encryption

Offline Solution

The data is stored locally, not in the cloud.

Report

Shows all accesses, including those via fingerprint or other opening systems. This gives you insight and control over when the door is opened.

Manage users

Up to 20 users are possible. Users can define the relevant doors and access authorisations for the group of people of their choice.

Easy to install

Self-explanatory

The App impresses with intuitive user guidance, so no training is necessary. Programming and administration is done by the end customer themselves.

Plug & Play instead of tinkering around

Easy to fabricate

The app-based access solution is the fastest, cheapest and most visually appealing for the end customer in production. The Bluetooth module is plugged directly into the motor and hidden invisibly in the door leaf. For this, only the milling for the main lock box has to be slightly enlarged. No further milling effort is required in the door unless the keypad or finger scan are to be additionally inserted into the door leaf.

Everything from a single source

With MACO, you receive all components from the motorised lock, via plug-in access solutions including cable transition, plunger contact and power supplies in one delivery.

Would you like everything from a single source?

With us you get complete solutions for your large surfaces, windows and doors – for timber, PVC and aluminium. Experience our versatile systems range with comprehensive service included. Discover more on our website www.maco.eu or contact your MACO customer advisor.
