## That special look in the door rebate

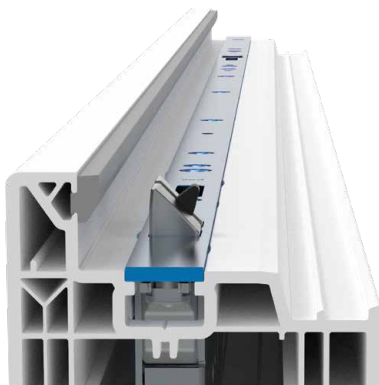

Would you like it to look a bit nicer? Faceplates not only serve as a cover, but also design the appearance of the door rebate. This is especially true for the elegant MACO top-hat faceplate. As its name suggests, it slips over the Eurogroove like a hat. This creates the security and appearance of the 24 mm flat faceplate in a 16 mm groove.

### The Benefits

The top-hat faceplate prevents dirt deposits in the groove and forgives fabrication errors that can occur during milling as it hides small inaccuracies behind it. You can also look forward to easy assembly as the screw positions of the top-hat faceplate correspond to those of the standard faceplate.

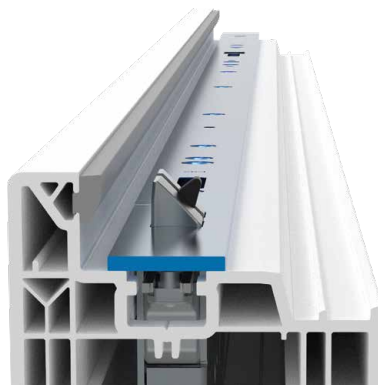

In addition, the top-hat faceplate increases stability and the burglar resistance levels are improved. Use it on all cylinder-operated multi-point locks in the Protect series, from manually operated drive motor locks to fully motorised door locks. In addition, you can use all proven Protect striker plates.

16 mm faceplate

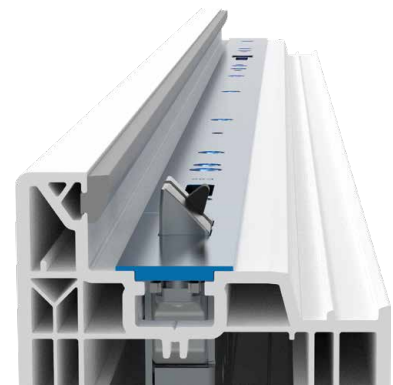

Inaccurate milling is visible

24 mm faceplate

Conceals inaccurate milling at the expense of rebate gap, but not practical

Top-Hat faceplate

Combines the advantages of both - high-quality optics without restricting the rebate gap tolerance
