1 Technical and General Information

1.1 How to use the catalogue

If not otherwise specified, all dimensions are stated in millimetres and packing units in items per box.

Delivery only in whole packaging units - if small quantities are ordered, they are automatically rounded up to the specified packaging unit!

All illustrations are symbolic only and do not claim to be a technically correct match with the hardware components.

The content of this document is constantly being updated, so regular comparison is necessary (please note the date on the back of the document).

The current version is downloadable from www.maco.eu and www.hautau.de.

Further technical documents are available in our Technical Online Catalogue TOM (extranet.maco.eu).

No liabilities are accepted for possible printing errors, mistakes or changes.

©MACO Group 2023 - Distribution and reproduction of this document, utilisation and communication of its contents are prohibited unless expressly permitted. Infringements will result in compensation for damages. All rights reserved.

1.2 Product information

The HS Comfort Drive electric motorised drive is used with sliding and lift & slide elements made of timber, PVC and light metal, as well as combinations of these materials. The drive system can be used to realise sash arrangements in Scheme A and Scheme C. In addition to the electric motorised hardware components, mechanical hardware components such as sliding or lift & slide drives are required. The drive system is also suitable for retrofitting existing sliding and lift & slide elements.

The HS Comfort Drive is equipped with automatic anti-trap protection. If the sliding sash weighs more than 330 kg, additional external safety devices such as a light curtain or an infrared presence detector - both of which can be found in the MACO Group's product range - must be used to ensure safety.

The drive system can be designed in three operating modes: electric motorised sliding, electric motorised lifting and sliding, manual lifting and electric motorised sliding. The following

operating options are available: Operation via 3-button control keypad, 1-button control, key switch and control using smartphones via the WLAN box; full SmartHome integration, such as mediola®, is also applicable.

The MACO Group's sliding and lift & slide hardware can be used to fulfil the requirements for barrier-free construction in accordance with DIN 18040-2. In order to meet the requirements of this standard and regulation, special hardware combinations and installations in the window elements are required, which must be coordinated in individual cases and agreed separately; in addition, any national regulations must be observed for barrier reduction.

The resistance to wind load depends, among other things, on the construction of the window elements. If wind loads in accordance with DIN EN 12210, in particular the test pressure P3, are to be transferred, the window construction, the frame material and the hardware combination must be harmonised.

1.3 Intended use

The HS Comfort Drive electric motorised drive is intended for use in combination with components of manual sliding or lift & slide hardware components to create electric motorised sliding or lift & slide elements. The drives are intended exclusively for use in stationary buildings. They are used for the horizontal opening and closing of windows made of profiles for sliding or lift & slide elements. The window elements must be installed

vertically and horizontally, never at an angle. The application ranges and weights defined in the application diagrams must be adhered to; they must neither be exceeded nor fallen short of. Use of the hardware system outside the application limits is not permitted and will invalidate any warranty and product liability without exception.

1.4 Information on product safety and product liability

The quality and safety of the MACO Group's products are largely guaranteed by proper processing. To ensure this, the fabricator can download product-related documentation in the form of installation instructions and maintenance and operating instructions at www.maco.eu and www.hautau.de. The

installation instructions are an integral part of the product and must therefore be observed and complied with.

Failure to comply with the contents of the information accompanying the product releases the MACO Group, as the product manufacturer, from any liability.

1.5 Storage instructions fittings

Improper storage of the hardware parts can severely impair the surfaces as well as the electronic function. To prevent this, the following points must be observed:

- It must be ensured that the room air is permanently dry (max. 55 % humidity at 20 °C).
- Major temperature fluctuations that lead to the formation of

condensation must be prevented. This is because condensation on the surfaces of the drive components can lead to corrosion and destroy the electronic components.

- Salty air and air polluted by trade/industry leads to corrosion and is unsuitable for storage sites.

1.6 Manufacturer's declaration / State of the art

The electric motorised drives are manufactured and tested in accordance with the applicable European directives.

Corresponding installation declarations are available and can be downloaded from www.maco.eu and www.hautau.de.

1.7 Certificates, guarantees and standards

The Machinery Directive 2006/42/EC applies to electric motorised sliding and lift & slide elements. In addition, country-specific requirements regarding applicable laws, regulations, standards and directives must be observed.

The MACO Group ensures its high quality standard through ongoing, recurring internal product tests and external tests by

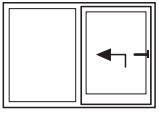

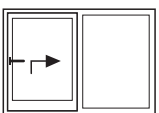

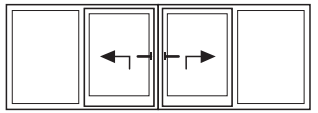

reputable, independent institutes. All certificates from the test centres, quality, safety and management systems, our guarantee declarations and the declaration of no objection for all products with regard to hazardous substances (RoHS and RAEC declaration) are available for download at www.maco.eu and www.hautau.de.

1.8 General Terms and Conditions

The current version of our General Terms and Conditions of the MACO Group is available for download at www.maco.eu and www.hautau.de.
