Access solutions that open everything up for you

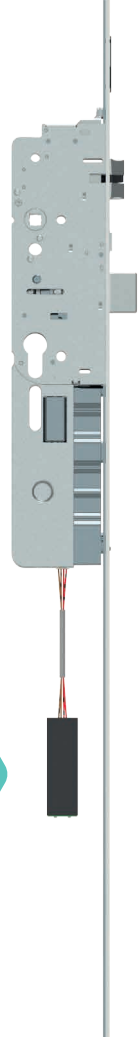

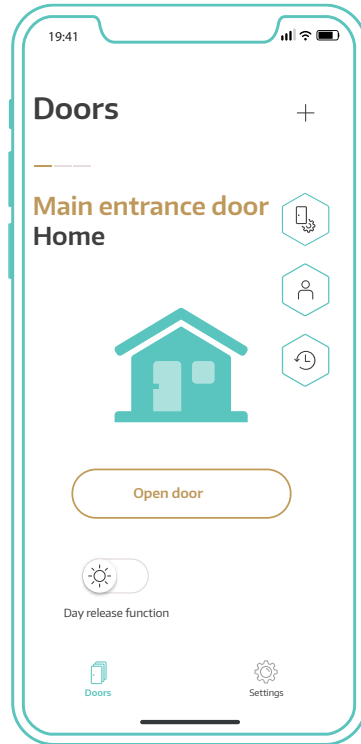

The key still holds symbolic power. But future generations will opt for more convenient ways to open the door – like a smartphone, fingerprint or keypad. Why? Because today's door locks no longer require a key. Instead, they lock the door automatically when it is closed – and can also be conveniently opened by a motor.

- › Keyless opening
- › For private home and apartment doors, for multi-party homes
- › For all motorised locks including INSTINCT, M-TS and A-TS with Comfort motor
- › MACO UPS module ensures it opens in case of power failure

Premium solution...

The smartphone app offers convenience while also being the simplest solution for a clean door leaf with low installation costs.

...basic solution, or both?

The finger scan and keypad can be used as a door opener in addition to the smartphone, or on their own.

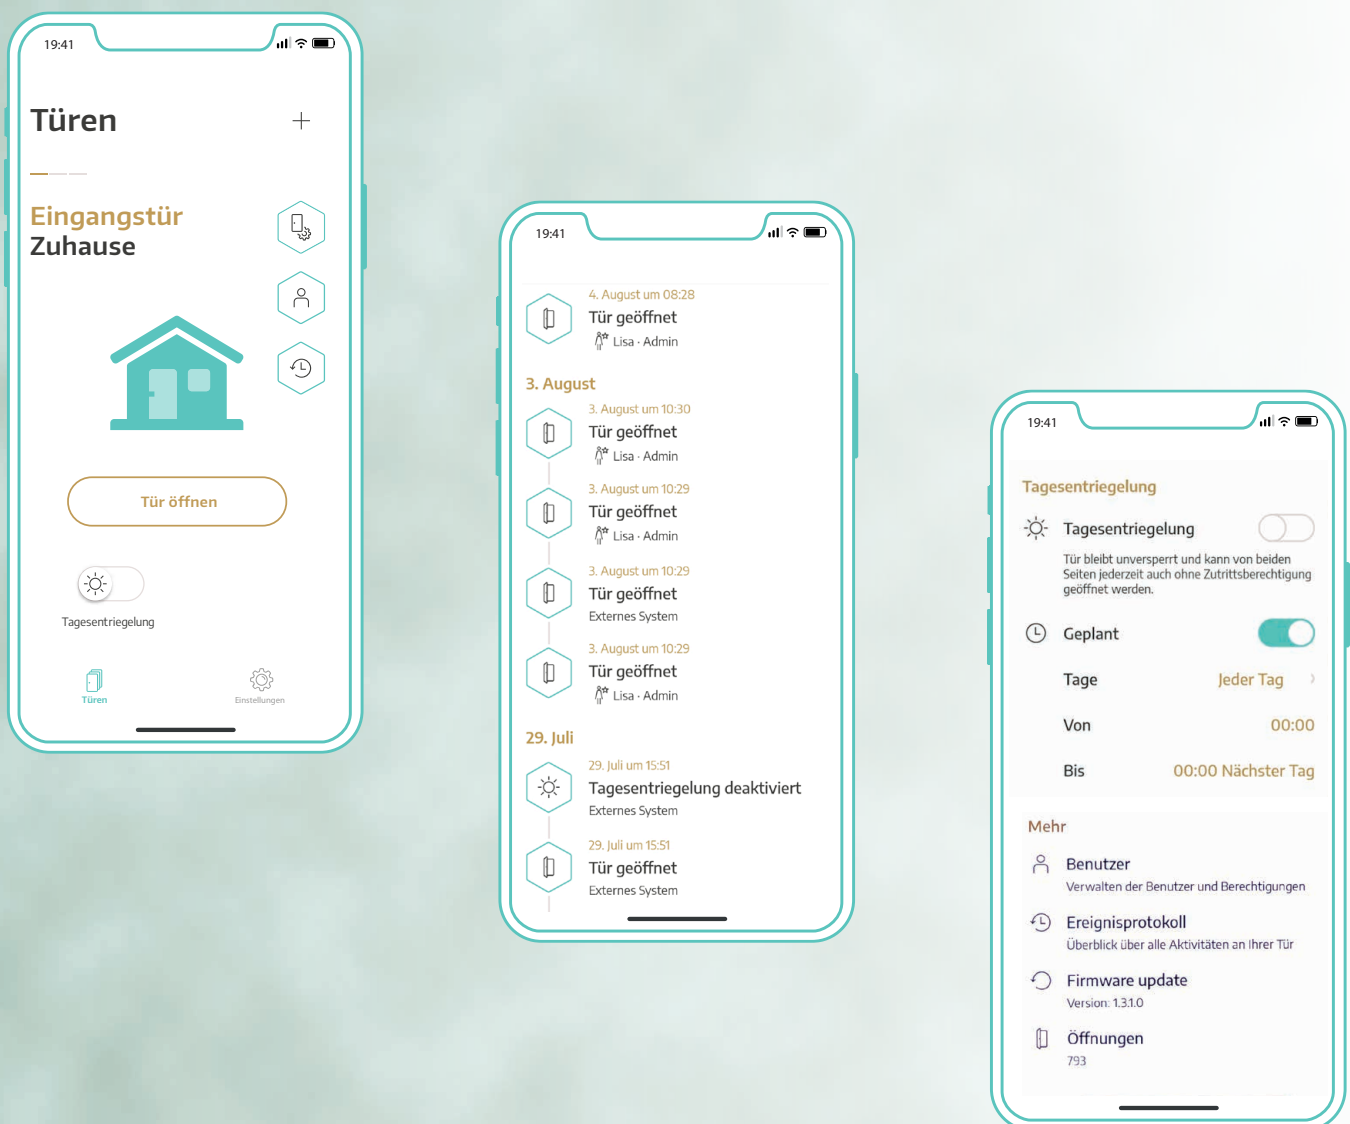

This makes doors easily accessible for all generations.

Instinct by MACO

The smartphone app

The smartphone is part of our everyday lives and is always with us. Doesn't it make sense to use it to open your front door? MACO has developed an app that turns your smartphone into a key replacement and offers a convenient, modern and cost-effective access solution – a true alternative to keypads or finger scans.

The INSTINCT app is available free of charge for iOS and Android.

Simply download from the App or Play Store, activate and choose the settings for your doors.

The premium way to open Instinct-ive to operate

As the name suggests, the app is intuitive to use and offers many options that support how we live today. The best part is that you don't need any complicated web-based programming to manage this. Especially practical: the app can be used with the innovative INSTINCT by MACO locking system as well as with A-TS and M-TS door locks.

Manage access

Permanent or time-limited: who has access and for how long is specified using the time function. The traditional handing over of keys to house cleaners, for example, is no longer necessary.

Day release function

Having a party or a children's birthday celebration in your house? Keyless daytime operation makes it possible for guests to come and go during this time – until the function is deactivated – which can be scheduled as desired.

Manage users

Up to 20 people can obtain access authorisations.

Short wireless links

Secure thanks to AES-256 encryption

Offline solution

The data is stored locally, not in the cloud.

Construction site mode

During the construction phase, any tradesperson who has the app on their smartphone can connect to the door and open it – until the house is ready for occupancy and the owner withdraws the authorisation.

One-time access

Access at short notice, such as for tradespeople, can be granted spontaneously and while away from home. To do this, the person concerned downloads the app onto their smartphone and receives one-time access granted via an invitation code.

Log

shows all accesses – including those via fingerprint or other opening systems, when combined with the INSTINCT by MACO locking system. This gives you insight and control over when the door is opened.

Even more functions

are offered by the INSTINCT app when combined with the innovative INSTINCT by MACO locking system.

The classic access solutions

Open doors with a finger scan...

The finger scan solution is integrated directly into the door leaf. dLine Touchkey also connects access with the smart home, if desired, with many convenient features included.

OPENDOOR TOUCHKEY dLine FINGERSCAN INSTEAD OF KEY

New sensor technology learns with every use and grows with you: children's fingers and minor injuries are no problem. Up to 20 users with 4 fingerprints each can be created and managed in the app. Fingerprints are scanned directly on the surface scanner.

VERSATILE AND PRACTICAL

dLine Touchkey can be operated by finger and smartphone. Smartphone operation is conveniently controlled with the cloud-based ekey bionyx app and offers many convenient functions:

- › Remote opening
- › Remote management of access authorisations
- › Push messages
- › Access log
- › Regular firmware updates
- › Remote support from the manufacturer
- › Smart home connectivity, e.g. with Amazon's Alexa

...or with a code

The keypad fits into the door leaf, door frame or intercom system. The door can then be opened quickly and easily by entering an individual code that is four to eight digits long. The "stationary key" can store 99 number sequences. And if a person's access authorisation needs to be withdrawn, their code is simply deleted. It's as simple as that.

OPENDOOR KEYPAD: AN ELEGANT TOUCH

The keypad is notable for its high-quality design and first-class feel. It confirms the correct code with a visual and acoustic signal and can be managed directly on the keypad.

Plug and play

Complete system with access control

Compact, simple plug and play connection with MACO door locks also makes it easy for fabricators. You get ready-made solutions with all components from a single source.

1 3-LATCH DOOR LOCK WITH MOTORISED OPENING

Automatic locking of the steel hooks and locking bolt offers a high level of security

3 TAMPER-PROOF

Finger scan integrated into the door leaf. Control unit protected against access by unauthorised persons

5 Maximum convenience with MOTORISED UNLOCKING

2 INVISIBLE BLUETOOTH MODULE

for use with the INSTINCT app

4 PLUG AND PLAY

Simple, non-interchangeable plug connection

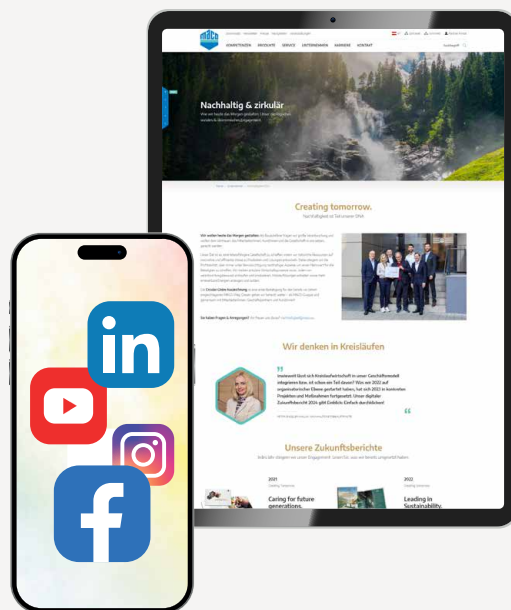

6 EASY TO ATTACH AND DETACH

the door using clip-on cable transition

Would you like everything from a single source?
