The parallel sliding system MACO Move PS – universal and efficient

Ease of use and function in small spaces

Little space required, intuitive operation, absolute air- and watertightness: **MACO Move PS hardware** enables implementation of sliding door solutions in aluminium or PVC with a sash weight of up to 250 kg. Seamless air- and watertightness is achieved with the wrap-around hardware, while the space-saving parallel positioning of the sash means that ventilation is possible even when the window sill is closed. And all this with minimum effort and maximum operating safety.

Benefits for fabricators

01 Quick installation

Drill, insert, screw on: **MACO Move PS hardware** can be installed quickly and directly. With standard tools and without requiring special work on the door unit.

02 Convincing cost-effectiveness

Whether for series production, property construction or public tenders – **MACO Move PS hardware** makes cost-effective sliding door solutions possible.

03 Highly flexible

Free choice: **MACO Move PS** makes it possible to implement special formats for sliding doors in which the handle can be positioned on all four sides of the sash.

Benefits for consumers

01 High ease of use

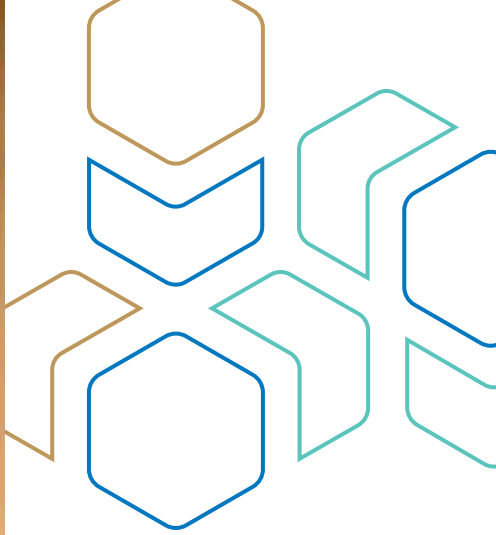

Effortless and safe: **MACO Move PS hardware** makes it possible to slide large sashes with minimal effort and maximum operating safety.

02 Attractive look

For a more beautiful appearance and view: The entire hardware mechanism is installed directly in the profile and is therefore completely hidden.

03 Enhanced security

Standard and reliable feature: MACO i. S. security roller cams, which are much more difficult to lever out, also significantly enhance burglary protection.

Special features

Air- and watertightness plus energy efficiency

Up to eight hardware elements on the long sides of the sash ensure synchronised application and release of window sash pressure. This achieves strong contact pressure that guarantees absolute air- and watertightness: Wind, weather and noise stay outside, heat and energy stay inside.

Higher loadbearing capacity

The tandem rollers enable parallel sliding of window sashes weighing up to 250 kg. The higher load-bearing capacity enables implementation of larger and heavier sliding door solutions and therefore greater customisation. And it does all this with the same level of security, air- and watertightness, and ease of use.

Easy maintenance

MACO Move PS hardware offers not only fast and secure installation using standard tools: A single adjustment of the contact pressure after installation is generally sufficient for the entire service life of the sliding door. And if not, the contact pressure can be adjusted at any time, even with the sash in place.
