

MACO Homee Homeegramms

What are Homeegramms

Homeegramms are simple programs that you can create in your homee app to control smart devices in your home, according to your needs and daily routines. They consist of triggers, conditions and actions.

Homeegram triggers

You can set one or more triggers. As the name suggests, they determine when and how your Homeegram is triggered. You can choose multiple options, such as time, weather, vacation mode, open status for window and doors, or even to trigger a Homeegram. Just be creative and enjoy the endless possibilities.

Homeegram conditions

A condition restricts the trigger. This means that your Homeegram will only be triggered when all the set conditions are met.

Homeegram actions

Here, you define what should happen when the Homeegram is triggered. Of course, you can also select multiple triggers

Trigger

» device, time, weather, status

Condition

» device, time

Actions

» device notification
